

Durometer is a relative hardness measure frequently used for rubber and plastic products.

There are several scales used for wheels.

The number is the rating from 0-100, with 0 being no resistance and 100 being very hard plastic.

Regardless of which scale a manufacturer uses the lower the number the more grip the wheel has.

SURFACE	WHEELS
EXTRA SLIPPERY	GIOTTO 47 FOX FOX LIGHT GIOTTO 47 SPECIAL
SLIPPERY	GIOTTO 49 MAGNUM 49 FOX GREASE 92 GIOTTO 50 FOX LIGHT

ROUGH	GIOTTO 60 GIOTTO 61 MAGNUM 60 GREASE 97 LEOPARD LEOPARD LIGHT

Freeskate or general wheels

[Dance wheels](#)

[Figure Wheels](#)

Larger diameter means greater roll, but hard to spin on, commonly used for Dance and figures (60 to 63mm).

Freeskate wheels generally smaller are diameter to allow for spinning (55 to 57mm).
